CIA HISTORICAL REVIEW PROGRAM RELEASE AS SANITIZED

1998

Frequency Modulated (FM) Radiobroadcasting Stations in the
 USSR

1. The following information is submitted in response to your request for data on FM transmitting facilities in the USSR. The table below, shows the estimated growth in the number of cities with FM radiobroadcasting stations since 1958.

USSR: Estimated Number of Cities with FM

Stations for Selected Years, 1958-64

| <u>Year</u> | <u>Cities</u> |
|----------------|---------------|
| 1958 | 25 |
| 1960 | 60 |
| 1962 (May) | 70 |
| 1963 (May) | 87 |
| 1964 (October) | 115 |

2. In the USSR it is standard practice for FM stations to be collocated with television transmitting facilities and for each FM station to be comprised of two transmitters, using the "Dozhd-2" station equipment. A rough estimate of the total number of FM transmitters in use, can be derived based on the assumption that FM stations at each city consist of two transmitters.
